help to answer this question. 2. A botanist discovers a new plant species in the Amazon rainforest that has blue leaves. Briefly explain what can be inferred about the pigments in the leaves of this plant. 7. Complete the following table that compares photosynthesis with cellular respiration. Photosynthesis Cellular respiration CO

### Chapter 7: Photosynthesis: Using Light to Make Food

Plants make food using photosynthesis. This needs light, carbon dioxide and water. It produces glucose, and oxygen as a by-product. Leaves are adapted to carry out photosynthesis.

### Photosynthesis test questions - KS3 Biology Revision - BBC ...

Photosynthesis occurs in the green tissue of plants. This is primarily in the leaves, although photosynthesis also occurs in stems. Roots aren't exposed to light, so there's no point for a plant to put chlorophyll in them. Flowers serve a reproductive purpose, so again, there's no reason for plants to use them for photosynthesis.

### Photosynthesis Quiz - Do You Know How Plants Make Food?

Photosynthesis and cellular respiration are biochemical pathways; ... We want to answer this question in a way that is thorough and understandable at the same time. Dust ...
